Module Specification

1.	**Module Code Number**
	NAA1661
2.	**Title of Module**
	Data Scholarship
3.	**Number of credits**
	10
4.	**Level**
	1
5.	**Status**
	Live
6.	**Semester in which module is taught and assessment period**
	Autumn, with assessment taking place in autumn Spring, with assessment taking place in spring
7.	**Session availability**
	Every year
8.	**Pre-requisites for admission to this module**
	None
9.	**Co-requisites for the module**
	None
10.	**Expected number of students taking the module**
	24
11.	**Rationale for Cap**
	24 is the maximum number of students with current teaching staff capability.
12.	**Target students**
	UNNC UG & PGT students
13.	**Availability to exchange students**
	Available

14. Summary of content

Students will work in a team together with supervision from the Library to define a cultural, historical, or sociological area of interest, investigating digital resources, existing data sets, and archives and using these as a basis to create new data scholarship outputs.

In this one-semester module, student activities will be covering an overview of Data Scholarship, which involves collecting data, cleaning data, analysing data, and data visualisation.

Working in teams, students will follow through one of the following project areas:

1. Data-driven Mergers & Acquisitions Decisions: Analysis and Visualisation project will apply statistical data analyzing and visualisation technologies to illustrate and interpret the story behind these corporate decisions.

2. Data Visualisation with Tableau will help students tell a good story and draw some exciting charts with the world-leading visualisation software Tableau.

3. Data Analysis with Python project will guide students to learn Python and gain research and career-building Python skills.

It is intended that students will grow in confidence through working together and developing their curiosity and creative ways of thinking about problems.

Each student will present as part of a 15-minute group presentation for an event in the Data Scholarship Lecture Program.

The students will also write a reflection (500-1000 words) to share their learning experiences and the knowledge they have received.

15. Module web links

None

16. Module activities

Phase 1 Preparation– Weeks 1	Looking at global best practices to inspire and provoke. Lectures will take place with a look at Data Scholarship and Research skills.
Phase 2 Project Work – Weeks 2-10	3 project teams were created under the supervision of Research Librarians to focus on one of the following directions: 1. Data-driven Mergers & Acquisitions Decisions: Analysis and Visualisation project will apply statistical data analysing and visualization technologies to illustrate and interpret the story behind these corporate decisions. 2. Data Visualisation with Tableau will help students to tell a good story and draw some exciting charts with the world leading visualisation software Tableau.

	3. Data Analysis with Python project will guide students to learn Python and gain research and career-building Python skills.
Phase 3 Assessment – Week 11	Data Scholarship Lecture Programme - Event Presentations. Personal learning reflection (500-1000 words).

Note: The specific arrangement is subject to the teacher.

17. Assessment details

1. Group project, produce a deliverable in the form of a data scholarship output. 50%
2. Participate in a 15-minute group presentation at the Data Scholarship Lecture Programme event. Spoken presentation is a requirement. 25%
3. Personal reflection about learning and experiences (500-1000 words). 25%

Each group will prepare presentations that may involve images and data visualisations but must include oral presentations from every member of the group, answering questions about the presentation afterward.

The group presentations will be evaluated using this rubric.

GROUP PRESENTATION RUBRIC

Criteria	Excellent 10	Very Good 8	Satisfactory 6	Needs Improvement 4
Delivery	• Captured the audience with eye contact and clear voice • Professional delivery • Well-prepared	• Good eye contact • Prepared • Fluid delivery • Good voice	• Little eye contact • Somewhat prepared • Choppy delivery • Hard to hear and follow	• No eye contact • Unprepared • Very poor delivery • Very difficult to hear and follow
Content	• Clear objectives and subject matter • Accurate, complete and useful information • Complete and correct citation of references • Ideas are summarized and the audience is left with full understanding of the topic	• Some success in defining the objectives and subject matter • Some examples, facts and other useful information • Some citation of references • May need to refine summary or final idea	• Attempts to define the objective and subject matter • Some information are inaccurate and not useful • Incomplete and wrong citation of references • Major ideas are not summarized or the audience is left with vague ideas	• Objectives and subject matter are not clearly defined • Useful information are missing • References are not cited • Major ideas are unclear leaving the audience with no learning
Teamwork	• Clear evidence of teamwork and equal division of labor. • Tasks have been distributed within the group • Assigned tasks performed by each member	• Adequate evidence of teamwork and fairly good division of labor • Tasks have been distributed within the group • Assigned tasks performed by most of the members	• Some evidence of teamwork and some division of labor • Most of the work was done by only 1 person	• Little evidence of teamwork and division of labor. • Only 1 person did all of the work

18. Module Convenor

Danni Wang, Research Librarian

19. Administration details

The Library

20. Aims

This module gives an oversight of research skills and provides a new interesting view of older digitalised data assets through different presentation methods. It also gives students practical experience in designing and executing outputs such as those that could contribute to a research publication.

- To give students practical experience in demonstrating competence in a range of software skills through communication, presentation, and learning.
- To give students an understanding of the nature and function of social business, ethics, and enterprise as they engage the UNNC community
- To enable students to develop cultural sensitivity/ transnational learning, as some projects may involve bridging cultural divides.
- To provide exposure to particular workspaces and resources as some projects may involve short stints in specific UNNC faculties or departments and the use of new external resources students were not previously familiar with.

21. Learning outcomes. By the end of the module, students should be able to:

A Knowledge and understanding – outcomes that broadly describe the subject matter of the programme/module

- Understand the potential of technology in creating interest in financial, cultural, and historical information.

B Intellectual skills – the abilities required to process the subject matter

- Design and produce a digital output, including creating, preparing data, producing visualisations, developing thought on research areas, and engaging in topics previously unknown.

C Professional/practical skills – those skills specific to a particular subject area (option)

- Knowledge of leading data visualisation tools.

D Transferable (key) skills – skills such as oral and written communication, teamwork, self-management, problem-solving, critical thinking, professionalism, etc

- Demonstrate effective teamwork skills through the group project.
- Demonstrate effective oral and written communication through their presentations and learning outcome reports.
- Demonstrate interpersonal skills and professionalism through working together and presenting.
- Develop learner autonomy and self-management by accessing online materials, tutorials, and books to deepen their knowledge of technology and research.
- Develop reflective practice through the group presentation and learning blog.

22. Resources

Three Research Librarians from the Library to convene, lecture, and mark.

23. List which schools and faculties have been consulted (and support the proposal).

24. Consent Issue

By attending the module, you are automatically granted a non-exclusive permission to the University of Nottingham Ningbo China to use your research outputs (data visualisations, data, reflection) you made during the NAA1661 module – Data Scholarship in:

- Data Scholarship Forum
- Publications
- Research Data Postcards
- Touch Table
- Presentations
- Social Network Site Posts

25. Approved by the Head of School and other resource providers (in the case of Advantage Award, modules must be approved by the Advantage Award Academic Director and steering committee)

May Yan, Director, the Library
